

Abstract

TELECOMMUNICATIONS TRAFFIC REGULATOR

A packet traffic shaper (208) is disclosed, comprising determination means (404)
5 configured to determine a constraint parameter dependent upon a probability density
function, and constraining means (410, 400) configured to constrain, based upon the
parameter, transmission of traffic input to said constraining means (410, 400), thereby to
produce output traffic having a pre-determined entropy bound.
